## Connecting dimensions for roller chains, European and American types

- Required material hardness of fixing elements: at least 490 N/mm<sup>2</sup>
- To increase wear resistance, fit a bush (surface hardness rating approx. 60 HRC) to the connecting element, if joint mobility is required at the connection point.
- Hardened bushes are not required in case of static loading
- Please order bushes using the corresponding bush part no.
- The bush bore diameters  $d^{C10}$  result from press-fitting in bore diameter  $D^{S7}$
- If no bushes are fitted, the bore  $d^{C10}$  is inserted directly into the connection element

An appropriate lubrication method should be selected, depending on chain speed.

These guideline values are valid for shock-free loading, a shaft centre distance of 40 x pitch, with the chain running over two sprockets and a number of teeth z1 = 21; z2 = 42. Other drive parameters can be determined using the Rexnord chain calculation program Rex®Drive.

\*The temperature range can be extended by using special high- or low-temperature lubricants.
